No pencil or eraser required! by Nick Evans | Last Updated: November 15, 2021 Wondering how to defrost a mini fridge? If you see frost build up inside your appliance, you should defrost it so your food stays fresh and your appliance lasts longer. Defrosting a mini fridge can be very time consuming. While there is nothing wrong with unplugging your fridge and letting the frost and ice melt away naturally, there are faster ways to defrost. Before you start, though, there are a few things to know, and we'll cover them all in this guide. As mentioned, defrosting your mini fridge can require a significant amount of time. The step that takes the longest is simply waiting for the frost and ice to melt away. The good news is that we have two methods that will help speed the process up! The blow dryer method will significantly reduce the time it takes to defrost your mini fridge. The downside is you'll need to actively hold the blow dryer to the mini fridge for about 45 minutes straight. Step 1 - Unplug the Mini Fridge Anytime you are working on an appliance, it is safest to make sure it is unplugged. Step 2 - Place a Towel Underneath Place a towel underneath the mini fridge. As the mini fridge starts to defrost, the ice will eventually melt into liquid. A towel is a great way to ensure any water that leaks from the mini fridge is soaked up. Take everything out of the mini fridge. This includes all of your food, drinks, and shelving. Step 4 - Use Blow Dryer Once your mini fridge is empty, aim a blow dryer at the frost inside the mini fridge and keep the heat on until the frost melts away. As a safety note, make sure your hands are completely dry before using the blow dryer. Step 5 - Dry the Mini Fridge Once the ice is melted, wipe the mini fridge down and make sure it is completely dry. Once the mini fridge is dry, you can plug it back in. After about two hours, you should be back in business. Your Are Spending Too Much on Your Electricity 10 appliance hacks to help you save up to \$100 per month on your electric bill. A fan is another tool that can help you hack the time it takes to defrost your mini fridge. All of the steps for the fan method are identical to the blow dryer method, except for step 4. Always start off by unplugging your mini fridge. Step 2 - Place a Towel Underneath Place a towel underneath the mini fridge. As the mini fridge starts to defrost, the ice will eventually melt into liquid. A towel is a great way to ensure any water that leaks from the mini fridge is soaked up. Step 3 - Remove the Items Remove all the contents from the mini fridge, including food, drinks, and shelving. Step 4 - Turn on a Box Fan Make sure the mini fridge door is open, then aim a box fan (or any other fan) at the mini fridge. The air from the fan will speed up the time it takes for the ice to melt. After the ice and frost have melted, wipe the mini fridge dry with a towel. Step 6 - Plug it Back in Finally, plug the mini fridge back in. After letting the fridge cool for about two hours, you should be able to use it. How Long Does it Take a Mini Fridge to Defrost? This depends on the method you use to defrost your mini fridge. If you are using a blow dryer or a fan, the process can defrost the mini fridge in about an hour. If you are letting the ice melt naturally, you should plan on a 24 hour period to fully defrost your mini fridge. Why is My Mini Fridge Frosting Up? Bad gasketMoisture build upToo full Bad Gasket There are a number of reasons why your mini fridge will frost up, but one of the most common is a bad gasket. A refrigerator gasket is the lining that seals the door to ensure the air flow. When a mini fridge has a bad gasket, it means the seal is broken. If the seal in your mini fridge is broken, the compressor in the mini fridge has to overcompensate for the amount of warm air leaking in from the outside. Because of this, there is often too much refrigeration, which leads to frost. Fortunately, replacing the gasket on a mini fridge is easy. You can order a new gasket directly from Amazon. Moisture build up Moisture build up is another very common reason your mini fridge may be frosting up. Leaving the mini fridge door open, or opening it more than necessary allows warmer air to travel into the fridge, resulting in condensation. This can then turn into frost. Too full If your mini fridge has too much in it, the airflow can be restricted. This means the cold air doesn't have as much room to move around and can potentially cause frost build up. As with all home appliances, proper maintenance is important. Failure to defrost your mini fridge can result in higher electricity bills, spoiled food, and an overall shortened life span of your mini fridge. Is Ice Build Up in a Mini Fridge Bad? Yes it is. Any ice build up in your mini fridge can cause problems and actually raise the fridge's temperature. Do You Have to Defrost a Mini Fridge? While you do not have to defrost your mini fridge, it is highly advised. Keeping your mini fridge frost-free helps your food and drink stay refrigerated and fresh. It also increases the lifespan of your mini fridge. How Often Should You Defrost a Mini Fridge? You should defrost your mini fridge at least once every six months. If you see frost building up prior to the six month mark, be sure to defrost it as soon as possible. Whether you have a chalkboard fridge or not - if you have a mini refrigerator, you will most likely need to defrost it at some point. Below are the steps on how to defrost your fridge quickly, and it's surprisingly simple. How to Defrost a Mini Fridge Fast: 1. Unplug your fridge. 2. Take all items out of your refrigerator and/or freezer and put them in a cooler with a lid. If you don't have a cooler (or one big enough), you could unload everything into a bathtub. 3. Open the door/doors to your mini fridge and leave them open for 60 minutes. If you have a lot of frost buildup in the freezer, you may want to place a towel on the floor in front of the open door just in case the defrosting ice comes tumbling out. 4. Come back to your fridge in 60 minutes, and the ice should have started melting away. Then, you can gently (I said gently!) pull the ice away. Note: Don't try to stick a screwdriver in and wedge the ice out. This can wreck the sides of the appliance and then you'll be angry! I sometimes use a rubber spatula if the ice needs a little "coaxing". 5. If the ice is being difficult, use a warm wet washcloth to gently loosen up the ice. Ice is usually not difficult, especially if you are defrosting your mini fridge every 3-6 months. 6. Lastly, wipe down the sides and back with a dry cloth. In other words, remove as much moisture as you can. This will help prevent ice build up in mini fridge from starting right away. Then, plug the refrigerator back in and reload it with all your food and drinks. Some Tips for Easier/Faster Defrosting: 1. Defrost Your Fridge on a Warm Day: Choose a warm and/or sunny day and move your fridge in the sun. A simple temperature change can work wonders, and your little appliance can defrost in as little as 30 minutes. 2. How to Keep Food/Drinks Cool While Defrosting: Does your compact appliance have 2 compartments (a refrigerator and separate freezer section)? Then, you can leave your food in the fridge and simply leave the door open to the freezer while defrosting. If you have enough space, move the freezer items into the fridge. This maintain the chill while the fridge defrosts itself. Alternatively, you can place all food and drink into an enclosed plastic cooler for an hour. 3. Defrost More Frequently to Make the Task Easier: The more often you defrost the mini fridge, the less time it takes. Plus, less ice build-up makes removal easier too. Defrosting a Mini Fridge is Easier than You Think. Don't be afraid of manual defrost appliances, because removing the ice is quick and easy once you get the hang of it. When you do regularly-scheduled maintenance and have an easy system in place - it's a snap. You can watch your favorite TV show while you're doing it, make dinner - or even go to the grocery store to buy more food. Will this Defrost Method Work on a Full-Size Refrigerator? With a larger manual defrost refrigerator, you can apply this same strategy, but the process will take longer. I suggest two things: Don't decide to start when you have a ton of frozen food. In other words, plan a time when your fridge isn't full. Get a bag of ice for your cooler or bathtub before your begin your project. Therefore, you can give your appliance as much time as it needs to melt the frost.
